

Hapoel Jerusalem

Season 2025-26 · Record 18-8 · 26 games · 2025-10-12 to 2026-05-27

Generated 2026-08-19T09:43:57Z

Deterministic play-by-play analytics for the current season.

Executive Summary

Hapoel Jerusalem plays at a style characterized by a slow pace, relying heavily on securing points from the free-throw line and dominating the offensive glass. Their overall success is heavily correlated with defensive efficiency and maintaining low turnover rates, as their offensive efficiency drops in losses. When trailing, they show a strong capacity to generate scoring runs and maintain efficient shooting, though this ability is less pronounced in their losses. However, their late-game execution is a notable vulnerability, with clutch shooting efficiency falling below the league average, particularly in games they lose.

Keys to Win

Each key is an evidence-supported objective. A tactical option is included only when the evidence points to that specific method — most keys have none, and that is expected, not a gap.

1. Execute disciplined defense in late-game situations to contest their clutch shot attempts.

(confidence: moderate)

Why it matters: Their clutch effective field goal percentage is below the league average and is notably lower in losses than in wins.

Clutch Effective FG% 40.7% · scope clutch · rank 10 of 14 · league avg 50.2% · W 50.7% / L 30.6%, d=0.94 · n=14g · moderate reliability

2. Maintain defensive focus when leading to prevent their scoring runs. (confidence: moderate)

Why it matters: They possess a league-leading capacity for putting together individual scoring runs and maintain a near-league-leading effective field goal percentage when trailing by multiple possessions, though this trailing efficiency is lower in losses.

Largest Scoring Run (per game) 10.5 · rank 1 of 14 · league avg 9.5 · W 10.7 / L 10.1, d=0.22 · n=26g · high reliability

Effective FG% When Trailing 6+ 69.7% · scope behind_6_plus · rank 2 of 14 · league avg 60.0% · W 87.5% / L 54.4%, d=1.5 · n=13g · moderate reliability

3. Focus on defensive execution to lower their offensive efficiency. (confidence: high)

Why it matters: Their defensive efficiency is stronger in wins than in losses, representing a differentiator in their overall net rating.

Defensive Rating 108.9 · rank 4 of 14 · league avg 110.3 · W 103.8 / L 121.5, d=-1.21 · n=26g · high reliability

Net Rating 9.4 · rank 3 of 14 · league avg 0.1 · W 18.0 / L -10.7, d=2.64 · n=26g · high reliability

4. Pressure their ball handlers to increase their turnover rate. (confidence: moderate)

Why it matters: Their offensive efficiency is higher in wins, which correlates with a lower turnover rate in those victories compared to losses.

Offensive Rating 118.4 · rank 3 of 14 · league avg 110.4 · W 121.8 / L 110.8, d=0.97 · n=26g · high reliability

Turnover Rate 13.4% · rank 3 of 14 · league avg 15.8% · W 12.6% / L 15.7%, d=-0.65 · n=26g · moderate reliability

5. Limit their second-chance opportunities by securing defensive rebounds. (confidence: high)

Why it matters: They are highly effective at securing their own missed shots, maintaining a near-league-leading offensive rebounding rate that remains prominent regardless of game outcome.

Offensive Rebound % 33.8% · rank 2 of 14 · league avg 30.3% · W 33.9% / L 32.7%, d=0.14 · n=26g · high reliability

Tactical option: Commit multiple players to boxing out immediately upon every shot release. — They maintain a near-league-leading offensive rebounding rate across all game outcomes, making physical box-outs a direct necessity to prevent second-chance points.

Offensive Identity

They play at a style characterized by a slow pace and derive a league-leading share of their points from the free-throw line.

Pace 75.2 · rank 12 of 14 · league avg 77.1 · W 76.0 / L 73.6, d=0.48 · n=26g · high reliability

Share of Points from FT 19.1% · rank 1 of 14 · league avg 16.8% · W 19.1% / L 19.0%, d=0.01 · n=26g · moderate reliability

They demonstrate a strong tendency to secure their own missed shots, maintaining a near-league-leading offensive rebounding rate.

Offensive Rebound % 33.8% · rank 2 of 14 · league avg 30.3% · W 33.9% / L 32.7%, d=0.14 · n=26g · high reliability

Strengths

They possess a near-league-leading offensive rebounding rate that remains prominent regardless of game outcome.

Offensive Rebound % 33.8% · rank 2 of 14 · league avg 30.3% · W 33.9% / L 32.7%, d=0.14 · n=26g · high reliability

They exhibit a league-leading capacity for putting together individual scoring runs.

Largest Scoring Run (per game) 10.5 · rank 1 of 14 · league avg 9.5 · W 10.7 / L 10.1, d=0.22 · n=26g · high reliability

Effective FG% When Trailing 6+ 69.7% · scope behind_6_plus · rank 2 of 14 · league avg 60.0% · W 87.5% / L 54.4%, d=1.5 · n=13g · moderate reliability

They maintain a near-league-leading effective field goal percentage when trailing by multiple possessions, though this trailing efficiency is indicated to be lower in losses.

Largest Scoring Run (per game) 10.5 · rank 1 of 14 · league avg 9.5 · W 10.7 / L 10.1, d=0.22 · n=26g · high reliability

Effective FG% When Trailing 6+ 69.7% · scope behind_6_plus · rank 2 of 14 · league avg 60.0% · W 87.5% / L 54.4%, d=1.5 · n=13g · moderate reliability

Vulnerabilities

Their clutch effective field goal percentage is below the league average and is notably lower in losses than in wins.

Clutch Effective FG% 40.7% · scope clutch · rank 10 of 14 · league avg 50.2% · W 50.7% / L 30.6%, d=0.94 · n=14g · moderate reliability

Their offensive efficiency is indicated to be lower in losses, which correlates with a higher turnover rate in those games.

Offensive Rating 118.4 · rank 3 of 14 · league avg 110.4 · W 121.8 / L 110.8, d=0.97 · n=26g · high reliability

Turnover Rate 13.4% · rank 3 of 14 · league avg 15.8% · W 12.6% / L 15.7%, d=-0.65 · n=26g · moderate reliability

Their defensive efficiency is stronger in wins than in losses, representing a major differentiator in their overall net rating.

Defensive Rating 108.9 · rank 4 of 14 · league avg 110.3 · W 103.8 / L 121.5, $d=-1.21$ · $n=26g$ · high reliability

Net Rating 9.4 · rank 3 of 14 · league avg 0.1 · W 18.0 / L -10.7, $d=2.64$ · $n=26g$ · high reliability

Turnovers

Their turnover rate is among the lowest in the league, but it is indicated to be higher in losses than in wins, correlating with lower offensive efficiency in those defeats.

Offensive Rating 118.4 · rank 3 of 14 · league avg 110.4 · W 121.8 / L 110.8, $d=0.97$ · $n=26g$ · high reliability

Turnover Rate 13.4% · rank 3 of 14 · league avg 15.8% · W 12.6% / L 15.7%, $d=-0.65$ · $n=26g$ · moderate reliability

Key Deterministic Evidence

Every value below is computed from play-by-play, not written by a model.

Metric	Scope	Value	League rank	League avg	Sample	Reliability
Pace	season	75.2	12 of 14	77.1	26g	high
Share of Points from FT	season	19.1%	1 of 14	16.8%	26g	moderate
Offensive Rebound %	season	33.8%	2 of 14	30.3%	26g	high
Largest Scoring Run (per game)	season	10.5	1 of 14	9.5	26g	high
Effective FG% When Trailing 6+	behind_6_plus	69.7%	2 of 14	60.0%	13g	moderate
Clutch Effective FG%	clutch	40.7%	10 of 14	50.2%	14g	moderate
Offensive Rating	season	118.4	3 of 14	110.4	26g	high
Turnover Rate	season	13.4%	3 of 14	15.8%	26g	moderate
Defensive Rating	season	108.9	4 of 14	110.3	26g	high
Net Rating	season	9.4	3 of 14	0.1	26g	high

Data Limits

- The trailing metric and clutch shooting metrics are based on a moderate sample of games and use an unweighted segment mean.
- Some metrics (pace, shot mix, free-throw rate) describe style, not quality — no direction is inherently good or bad.
- Situational splits (clutch, trailing, etc.) are small-sample averages — read them as directional, not precise.
- **Shot location & possession type:** No shot-zone, shot-distance, or half-court/transition breakdown beyond what's shown above.
- **Player & lineup detail:** Team-level only — no player, lineup, or pass-tracking data.
- **Video-derived metrics:** No shot contest, shot creation, or on-ball pressure data — no video was analyzed.
- **Defensive scheme:** No coverage, personnel, or play-calling data — play-by-play doesn't capture it.

Every figure is computed from official play-by-play. Team-level only — no player, scheme, or video-derived analysis.
