

Hapoel Jerusalem

Season 2025-26 · Record 18-8 · 26 games · 2025-10-12 to 2026-05-27

Generated 2026-08-19T10:57:17Z

Executive Summary

Our scouting report on Hapoel Jerusalem reveals a team that establishes a clear stylistic identity through a slow tempo and excellent possession control. They protect the ball well and excel at securing offensive rebounds to maximize their possession count, while deriving a league-leading share of their points from the free throw line. However, their efficiency drops off significantly in losses, particularly on the defensive end. Furthermore, their shooting efficiency in clutch situations falls below the league average and is even lower in defeats. While they show a capacity for high-scoring bursts and shoot effectively when trailing, forcing them into close, late-game situations and limiting their second-chance opportunities are key to securing a victory.

Keys to Win

Each key is an evidence-supported objective. A tactical option is included only when the evidence points to that specific method — most keys have none, and that is expected, not a gap.

1. Force close-game situations to exploit their late-game shooting drop-off. (confidence: moderate)

Why it matters: Their effective field goal percentage in clutch situations is below the league average and is lower in losses than in wins.

Clutch Effective FG% 40.7% · scope clutch · rank 10 of 14 · league avg 50.2% · W 50.7% / L 30.6%, d=0.94 · n=14g · moderate reliability

2. Maintain defensive pressure when leading to prevent scoring bursts. (confidence: moderate)

Why it matters: The data points toward a capacity for high-scoring bursts, as they lead the league in their largest scoring run per game, and they rank near the top of the league in effective field goal percentage when trailing.

Largest Scoring Run (per game) 10.5 · rank 1 of 14 · league avg 9.5 · W 10.7 / L 10.1, d=0.22 · n=26g · high reliability

Effective FG% When Trailing 6+ 69.7% · scope behind_6_plus · rank 2 of 14 · league avg 60.0% · W 87.5% / L 54.4%, d=1.5 · n=13g · moderate reliability

3. Attack their defense to exploit their defensive drop-off in losses. (confidence: high)

Why it matters: Their overall net efficiency shows a notable difference between wins and losses, with their defensive rating being more favorable in victories.

Net Rating 9.4 · rank 3 of 14 · league avg 0.1 · W 18.0 / L -10.7, d=2.64 · n=26g · high reliability

Offensive Rating 118.4 · rank 3 of 14 · league avg 110.4 · W 121.8 / L 110.8, d=0.97 · n=26g · high reliability

Defensive Rating 108.9 · rank 4 of 14 · league avg 110.3 · W 103.8 / L 121.5, d=-1.21 · n=26g · high reliability

4. Limit their second-chance opportunities by securing defensive rebounds. (confidence: moderate)

Why it matters: They control possessions by securing an offensive rebounding rate that ranks among the highest in the league.

Turnover Rate 13.4% · rank 3 of 14 · league avg 15.8% · W 12.6% / L 15.7%, d=-0.65 · n=26g · moderate reliability

Offensive Rebound % 33.8% · rank 2 of 14 · league avg 30.3% · W 33.9% / L 32.7%, d=0.14 · n=26g · high reliability

Tactical option: Commit multiple players to boxing out and securing defensive rebounds on every possession. — They secure an offensive rebounding rate that ranks among the highest in the league, so preventing them from getting second-chance opportunities is critical to limiting their possession count.

Offensive Identity

They play at a tempo that ranks among the slowest in the league, establishing a distinct stylistic identity.

Pace 75.2 · rank 12 of 14 · league avg 77.1 · W 76.0 / L 73.6, d=0.48 · n=26g · high reliability

They derive a league-leading share of their points from the free throw line, which remains almost identical in both wins and losses.

Share of Points from FT 19.1% · rank 1 of 14 · league avg 16.8% · W 19.1% / L 19.0%, d=0.01 · n=26g · moderate reliability

Strengths

They control possessions by maintaining a turnover rate that ranks among the lowest in the league and securing an offensive rebounding rate that ranks among the highest in the league.

Turnover Rate 13.4% · rank 3 of 14 · league avg 15.8% · W 12.6% / L 15.7%, d=-0.65 · n=26g · moderate reliability

Offensive Rebound % 33.8% · rank 2 of 14 · league avg 30.3% · W 33.9% / L 32.7%, d=0.14 · n=26g · high reliability

The data points toward a capacity for high-scoring bursts, as they lead the league in their largest scoring run per game, and they rank near the top of the league in effective field goal percentage when trailing.

Largest Scoring Run (per game) 10.5 · rank 1 of 14 · league avg 9.5 · W 10.7 / L 10.1, d=0.22 · n=26g · high reliability

Effective FG% When Trailing 6+ 69.7% · scope behind_6_plus · rank 2 of 14 · league avg 60.0% · W 87.5% / L 54.4%, d=1.5 · n=13g · moderate reliability

Vulnerabilities

Their effective field goal percentage in clutch situations is below the league average and drops further in losses.

Clutch Effective FG% 40.7% · scope clutch · rank 10 of 14 · league avg 50.2% · W 50.7% / L 30.6%, d=0.94 · n=14g · moderate reliability

Their overall net efficiency shows a notable difference between wins and losses, with both their offensive and defensive ratings being less favorable in defeats.

Net Rating 9.4 · rank 3 of 14 · league avg 0.1 · W 18.0 / L -10.7, d=2.64 · n=26g · high reliability

Offensive Rating 118.4 · rank 3 of 14 · league avg 110.4 · W 121.8 / L 110.8, d=0.97 · n=26g · high reliability

Defensive Rating 108.9 · rank 4 of 14 · league avg 110.3 · W 103.8 / L 121.5, d=-1.21 · n=26g · high reliability

Transition

We cannot determine the specific play types or transition frequency associated with their possessions due to data limitations.

Turnover Rate 13.4% · rank 3 of 14 · league avg 15.8% · W 12.6% / L 15.7%, d=-0.65 · n=26g · moderate reliability

Offensive Rebound % 33.8% · rank 2 of 14 · league avg 30.3% · W 33.9% / L 32.7%, d=0.14 · n=26g · high reliability

Turnovers

They maintain a turnover rate that ranks among the lowest in the league, which helps them control possessions.

Turnover Rate 13.4% · rank 3 of 14 · league avg 15.8% · W 12.6% / L 15.7%, d=-0.65 · n=26g · moderate reliability

Offensive Rebound % 33.8% · rank 2 of 14 · league avg 30.3% · W 33.9% / L 32.7%, d=0.14 · n=26g · high reliability

Key Deterministic Evidence

Every value below is computed from play-by-play, not written by a model.

Metric	Scope	Value	League rank	League avg	Sample	Reliability
Pace	season	75.2	12 of 14	77.1	26g	high
Share of Points from FT	season	19.1%	1 of 14	16.8%	26g	moderate
Turnover Rate	season	13.4%	3 of 14	15.8%	26g	moderate
Offensive Rebound %	season	33.8%	2 of 14	30.3%	26g	high
Largest Scoring Run (per game)	season	10.5	1 of 14	9.5	26g	high
Effective FG% When Trailing 6+	behind_6_plus	69.7%	2 of 14	60.0%	13g	moderate
Clutch Effective FG%	clutch	40.7%	10 of 14	50.2%	14g	moderate
Net Rating	season	9.4	3 of 14	0.1	26g	high
Offensive Rating	season	118.4	3 of 14	110.4	26g	high
Defensive Rating	season	108.9	4 of 14	110.3	26g	high

Data Limits

- The trailing metric is based on a smaller sample of games where they trailed.
- Some metrics (pace, shot mix, free-throw rate) describe style, not quality — no direction is inherently good or bad.
- **Shot location & possession type:** No shot-zone, shot-distance, or half-court/transition breakdown beyond what's shown above.
- **Player & lineup detail:** Team-level only — no player, lineup, or pass-tracking data.
- **Video-derived metrics:** No shot contest, shot creation, or on-ball pressure data — no video was analyzed.
- **Defensive scheme:** No coverage, personnel, or play-calling data — play-by-play doesn't capture it.

Every figure is computed from official play-by-play. Team-level only — no player, scheme, or video-derived analysis.
